

SPRINT REVIEW / RETROSPECTIVE

Sprint 1

DATE: 13/04/2018

SPRINT DELIVERABLES

THINGS THAT WENT WELL

Although we were not able to get a meeting with our client, our team independently worked through examples on the Jira platform and developed a better understanding of the platform we will potentially need to build our application to support.

THINGS THAT COULD'VE GONE BETTER

Meeting with the client has been delayed during the university break, meaning we don't have access to the Jira license and haven't been able to discuss how the client would like the app to be implemented (Jira or standalone). The sprint was short, a week long, and happened during a very busy week of assignments for the team. This paired with the desire to implement the product backlog inside the Jira client meant that we were not able to get a full product backlog implemented, which was a goal at the beginning of the sprint.

LESSONS LEARNED

We learn the importance of clear communication with our shareholders. Because as a team we are unsure exactly how the client wants the application implemented after our initial meeting, we have been slightly delayed on the more

interesting developing work involved in our project. Will need to ensure at meetings with our shareholder we communicate clearly our development plans to ensure we are able to work without second guessing if we are working towards the clients project outcomes.
