Hi Tristan and Ben,

I was thinking about what you guys demo'd yesterday and have a few follow up points:

1. N/A: When we spoke about "N/A" as an option, you mentioned removing it; I think a place holder for non-client time is a good idea. For example, Tuesday mornings are typically team meeting and planning, we undertake training and we also have team events. N/A might not be the best title for that time, but it works for now.
2. Colour: once you update the default colour pallet, another stretch goal to add could be including an option to choose a colour for each client, making it easier to track who's working on which client at a glance. The available colours could be from a set list of your colour blind friendly pallet.
3. Time: I haven't thought about this much and I don't have a good suggestion on how to approach it... but another stretch goal could be to include some form of timestamp on when a row was last updated.
4. Fault tolerance: this one is something that we can talk about in our next meeting. I'm assuming that you are storing all data in your database, except for your web app files and session data. If that's the case, we can easily install the web app on multiple servers (in different availability zones) so it can be fault tolerant. Don't worry about it for now if that's not the case.

Ben:

I am confused about the AWS account you were using. I think the one you showed me on Tuesday was different to this one:

url: <https://661561244152.signin.aws.amazon.com/console>

usr: bj.crozierjones@gmail.com

... when looking at the account above, I thought its main purpose was for the other AUT team but I do see an account in your name there. I'm happy for you to use that too, but just make sure the other team don't delete your resources by mistake ☺. It might be easier to install your application on a single EC2 instance (for now) rather than trying to use ElasticBeanstalk. If you need help getting that and the RDS instance setup up, let me know.

If anyone else needs access, let me know.

Regards,
Craig.

Hi Craig,

Can do anything before 3 pm, have a lecture at that time.

Regards,
Tristan

Hi Tristan,

Tuesday afternoon works better for us. What times do you have free on Tuesday 24th?

Regards,
Craig.

Hello Craig and Grant,

Are you free some time next Tuesday or Thursday for a meeting?

Regards,
Tristan Kells

Hello Grant and Craig,

Does Tuesday still suit you? Was thinking whatever time suits you two on Tuesday 24/07. We can do anytime before 3pm.

Regards,
Tristan Kells

It's looking good. Feel free to book a session once you have time slots that work for all.

Regards,
Craig.

Subject: Aut Weekly Planner Team

Hello Grant and Craig,

Sorry for the lack of correspondence, exams and the following break have kept us busy. We have been making slow but steady progress. Attached is a video of the current application in action. Admittedly looks similar to the first version we showed but works with a database now, to save the state of the tables. Had it working with an AWS RDS instance at one point, but ran out of my free entitlement, so have it working off local an MYSQL DB at the moment.

Next on our agenda is implementing a login system for added security, along with updated UI and UX across the board. We would like to book a meeting with you in a couple weeks to collect feedback and look into AWS hosting options moving forward.

Regards,
Tristan Kells
