THINGS THAT WENT WELL

After the break, the team has made substantial progress on the application. The minimum viable product proposed in the sprint 4 planning document has been achieved and additional features have been added. The project is on track for the original project completion.

THINGS THAT COULD'VE GONE BETTER

Similar to the issues that we encountered the last sprint, the Jira backlog is not sufficiently utilised to give all member of the team sufficient information to work on the project independent of group work. Communication between the team during the break was non-existent, and some team productivity was undoubtedly lost as a result.

LESSONS LEARNED

Learned the importance of keeping the Jira / backlog management platform up to date, so that teammates can keep track of the team workflow without having to

meet in person or message each other directly. Will make backlog pruning and maintenance a core component of team meetings.
