

# SPRINT PLANNING

## *SPRINT 0*

DATE: 26/03/2018

## SPRINT GOALS

- Complete the proposal by 29/03/2018
- Complete the presentation 29/03/2018
- **By the end of Sprint 0**, we will have discovered if the app should be built natively in the Jira platform, through research and client consultation.
- **By the end of sprint 0**, if we discovered we won't build the app natively in the Jira platform, we will know how will we build it (Frameworks, SDK's, IDEs, languages etc...).
- **By the end of sprint 0**, we will know if you need to build and design a database (what we will use for user logins)
- **By the end of sprint 0**, we will have produced an outline of the tools and platform we will use to develop our solution
- **By the end of sprint 0**, we will have had another meeting with the client to show our proposal, design documents and proposed development platforms (we will propose a solution to the client and they will give us feedback, not asking the client for what they think we should do)
- **By the end of this sprint 0**, we will have set up a Jira space for the team to create collaboratively work in.

## ADDITIONAL TASKS

None, as still in the planning stage of development.
