Hello Geethika,

3rd of Sept works. Sounds good, we will aim to have the EC2 instance up and running by next week, will contact you if we have any issues.

Regards,
Tristan Kells

Yes, we can push the meeting to whenever suites you guys. Will 3rd of Sept work? If not feel free to suggest a date.

I think deploying it on a EC2 instance will be better as making a video will be extra work for you. Let me know if you've got any issues in deploying/setting things up in AWS.

Cheers,
Geethika

Thanks a lot for the feedback Geethika.

Good idea to move the password one up, pretty vital that you don't get locked out of your account. We will make some progress through these user stories and share the application with you next week. I think we originally discussed having a meeting next week, but to make sure we have some meaningful work to discuss, could we push that out two weeks, and instead we can give you a video of some new features, or we can set up the EC2 instance so you can access it from your office.

Regards,
Tristan Kells

Subject: Re: User stories prioritisation

Hi Guys,

Please find the prioritised list of user stories below. Feel free to get back to me if you've got any questions.

Rank	User Story	Comments
1	As a user, if I forget my password, I would be able to reset my password, so I don't lose access to my account.	In software development perspective this is a fundamental capability.
2	As a user, I would like a colourblind mode, so colour blind members of my team can still use the board.	Will give your product the edge in accessibility front
3	As a user, I would like to choose colours to represent different clients, so they are differentiated for both the week and month calendars.	
4	As a user, I would like a visual indicator showing the day and consultant I'm currently viewing while hovering any particular calendar position (For example, the consultant name and day of the week are highlighted when hovering over a specific allocation box.)	
5	As a user, when I'm on leave, I would like a robust visual indicator to show this	
6	As a user, I would like to see which office a consultant works at from subheadings.	
7	As a user, I would like the calendar to be easily readable on my mobile device so that I can track my team allocations on the go.	
8	As a user, I would like to be able to login with a social account.	Nice to have; Also the chances are organisations would want to use their IDPs for SSO; happy to discuss your options if/when you get this far down the list 😊
9	As a user, I would like to view a history of all work allocations made in the past, so I can keep track of which client is being worked on over a long time frame.	Nice to have; but the authoritative source of such info would be the time reporting tool as there will always be differences in planned vs actual time spent. So low priority
10	As a user, I would like to be able to edit my account information (email and password).	Don't bother(provided password reset feature is implemented above); likelihood of email being changed is very less;

Cheers,

Geethika Guruge

Subject: User stories prioritisation

Hello Grant and Geethika,

I've attached a list of what we feel are the key user stories, with some preliminary ordering. Feel free to let us know if you feel that any stories should be re-ordered. Otherwise, we plan on showing you some "coloured clients /allocation icons" prototypes before the end of the week, so we can start coding those feature into the application. Thanks for your feedback.

Regards,
Tristan Kells
